DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, 5-8 and 10-11 rejected under 35 U.S.C. 103(a) as being unpatentable over Edatsune (US Patent 5,802,488) in view of Imagawa *et al.* (US Patent 6,353,764).

3. Regarding claims 1, 10 and 11, Edatsune discloses an interactive speech recognition device, method and computer program disposed in a robot comprising:

speech recognition means for recognizing speech including a dictionary in which words to be recognized in speech recognition are described (Col. 10, Lines 35-42; Col. 4; Lines 25-28; Fig. 1A; Col. 4, Lines 25-28; Fig. 2B, see element 5);

control means for controlling said speech recognition means in accordance with a growth state of said robot, wherein said growth state is comprised of a plurality of

action decision means for determining and performing a predetermined action in accordance with the speech recognized by said speech recognition means and an occurrence probability of the predetermined action as determined by the growth state (Col. 4, Lines 62-Col. 5, Lines 5; Col. 5, Line 60 – Col. 6, Line 3 with Col. 11., Lines 8-32 and Col. 12, Lines 25-56); and

wherein said control means controls said speech recognition means such that the words described in said dictionary are weighted in accordance with the growth state of said robot and speech recognition is performed using the weighted words (Fig. 2B, *see words weighted through multiplication with coefficients*; Fig. 3A, *see Response Content Level Generation Unit, increasing the level of response as time passes and relationship between passage of time and level value is stored*, Col. 11, Lines 8-32; *recognition data is created in accordance with the content level*, Col. 11, Lines 47-59).

4. Regarding claim 3, Edatsune discloses an interactive speech recognition device, method and computer program wherein said control means changes the recognition accuracy of said speech recognition means in accordance with the growth state of said robot (Col. 16, Lines 35-42).

5. Regarding claim 5, Edatsune discloses said speech recognition means includes dictionary storage means for storing a plurality of dictionaries (Fig. 2A, element 21, Fig. 3A, element 32) in which words to be recognized in speech recognition are described such that the words to be recognized are divided into groups (weighting coefficients,

response content level) and the respective groups of words are stored in different dictionaries (Fig. 2A, element 21, Fig. 3A, element 32 and Col. 8, Lines 22-29 and Col. 11, Lines 17-20).

6. Regarding claim 6, Edatsune discloses an interactive speech recognition device, method and computer program wherein:

speech recognition means includes a dictionary in which words to be recognized in speech recognition are described (responses, Col. 11, Lines 8-32) such that other words are linked to said words to be recognized ("Good Morning" to G-o-o-d mor-ning; Col. 12, Lines 23-32); and

said control means controls said speech recognition means such that another word linked to a word (Col. 12, Lines 23-32), which is included in the dictionary and which is obtained as a speech recognition result, is output as a final speech recognition word depending upon the growth state of the robot (Col. 12, Lines 23-32).

7. Regarding claim 7, Edatsune discloses an interactive speech recognition device, method and computer program wherein words to be recognized in speech recognition are described in said dictionary such that said words are linked to other acoustically (Good Morning to G-o-o-d mor-ning; Col. 12, Lines 23-32) or semantically similar words.

8. Regarding claim 8, Edatsune suggests that control means controls the maximum

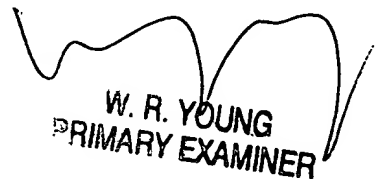

Art Unit: 2655

number of words to be described in said dictionary, in accordance with the growth state of said robot (Col. 12, Lines 23-32).
